Overview of current situation

Brief update:

During the past week Russian forces have continued to target Ukrainian infrastructure. There are no developments during the reporting period which change the overall threat picture.

Ongoing Russian attacks have continued throughout Ukraine, and have concentrated on the capital Kyiv, targeting housing and transportation. Port operations are not reported to have been impacted by attacks during the past week, and vessels are understood to continue to transit the Ukrainian Black Sea corridor. However, as previous pauses in targeting ports and port cities, have indicated, this does not necessarily indicate a change in the future attacks by Russian forces and therefore the general threat level remains unchanged as future attacks cannot be ruled out.

The deadline set by US President Trump for a ceasefire or peace agreement between Russia and Ukraine is set to expire on 08 August (Friday). Despite threats of extensive sanctions and economic pressure, it remains uncertain what actions will be taken if Russia does not comply. Given that Russia is already the most sanctioned country in the world, further sanctions are unlikely to have an immediate impact. However, the US administration may be planning secondary sanctions on countries conducting business with Russia, such as the announced 25% extra tariffs on India due to its import of Russian oil.

Meetings between US representatives and President Putin during the week did not immediately result in any major breakthroughs, and details of the meetings have not been disclosed as of the time of latest intelligence of this report. The levy of +25% tariffs on India on the same day indicate that no real progress was made. Still, it is reported that President Trump and Putin will meet at some point next week.

As noted in previous Risk Intelligence reports, the most likely negotiated solution is a highly limited ceasefire in a specific area or a hold on a specific type of weaponry. It has been noted

in media that Russia will suggest a ceasefire in the air, prohibiting the use of airborne weapons such as long-range drones, missiles, and gravity bombs. This would reduce the threat of direct strikes against ports and collateral damage to vessels calling at Ukrainian ports, while also limiting the threat against Russian ports. However, Ukraine's capabilities in surface weapons may allow strikes against maritime targets to continue.

Ukraine may be willing to accept such a ceasefire due to the extreme pressure of indiscriminate Russian attacks on large cities over the summer. However, a ceasefire would also limit Ukraine's successful attacks against the Russian rear and energy infrastructure. Both parties will be mindful of how their actions are perceived by the US, where Trump is under pressure to show progress on the conflict, which is likely to influence the Ukrainian response.

If accepted, the monitoring and implementation of such a ceasefire remain uncertain. Large and high-intensity strikes may occur before the ceasefire takes effect, including against ports.

The current scenarios for targeted attacks against vessel are:

Scenario 1: Vessels can be targeted due to flawed intelligence from the Russian military, suggesting they carry military hardware.

The likelihood of this has dropped considerably since the US stopped supplying weapons to Ukraine.

Scenario 2: Attacks may be aimed at deterring vessels from using the Ukrainian transit corridor and disrupting maritime exports by creating uncertainty and danger.

Scenario 3: Russia could target vessels to increase pressure on Ukraine to influence future negotiations.

Ukrainian Black Sea Corridor:

Vessels continue navigating the corridor to the open Ukrainian Black Sea ports, during the past week.

Strikes impacting vessels underway remain assessed as less likely to occur, as this would require direct targeting. Based on previous incidents involving vessels, indicate that the likelihood of collateral damage while in Ukrainian ports remain greater, and future incidents involving commercial vessels—whether from collateral damage, debris, missile misidentification, or potential direct targeting—cannot be ruled out.

The Ukrainian Black Sea corridor and ports operate under IMO Circular Letter 4748 and local guidance, though operational differences should be expected.

Operational disruptions such as power outages and air raid alarms are likely, until security improves. An elevated threat to maritime trade in the NW Black Sea and near the conflict area persists due to possible Russian actions against vessels and port infrastructure.

Black Sea:

War-related developments during the past week, do not change the threat picture for the Black Sea region, with the north-western area still an active war zone.

The security situation varies within the Black Sea, with lower threats to maritime operations in the southern half. Potential harassment, AIS/GPS signal jamming or spoofing, and the use of warning shots remain possible. Ukrainian forces are expected to continue pressuring Russian forces in the Black Sea, including in and near Crimea, in order to achieve greater control over the maritime domain to secure future shipping corridors to Ukrainian ports.

Russia, despite reduced naval capabilities in the Black Sea and the Sea of Azov, maintains a presence that can deploy mines or munitions into the Black Sea. Submarine deployment will be influenced by Ukrainian anti-ship capabilities. However, under current conditions, Russia is unlikely to enforce any blockade or

inspection regime in the north-western Black Sea. Although the overall usage of naval drones, both on surface and submerged is likely continues to increase by both sides, the deployment, as part of military operations, do not, in of themselves present a change to the current threat picture to maritime operations.

The threat of sea mines persists in the wider Black Sea, with ongoing Mine Countermeasure (MCM) operations conducted by Romania, Bulgaria, Turkey, and Ukraine.

Russian and Ukrainian military activity in the Black Sea, underlining the continued threats posed to shipping in the area. War-related implications, such as varying degrees of naval presence, congestion at regional straits and ports, sanctions on trade to and from Russia, and complications with crew changes, have become more common since Russia's withdrawal from the UN-backed Black Sea Grain Initiative in July 2023.

Sea of Azov:

The Sea of Azov is largely restricted for commercial traffic without Russian consent. Mariupol and Berdyansk ports, controlled by Russian forces, have unclear operational statuses. Reports indicate stolen Ukrainian cargo is being transported from these ports.

Ukraine monitors vessels to occupied ports in the Sea of Azov and may consider them potential military targets. Russia has increased defenses around the Crimea bridge due to Ukrainian strikes. Non-Russian-flagged vessels face disruptions in the Kerch Strait, and Russia may prohibit vessels loaded outside its territory from transiting. Attacks on Russian Black Sea ports operating at ISPS level 2 are probable.

Ukraine:.

Port information is located in the port table.

War-related developments, during the past week, does not change the overall threat picture for Ukraine. Power-outages and air-raid alarms continue throughout the country, which can also disrupt port operations. Concerns regarding the operational future of the country's energy network, including sufficient supplies and making the network more resilient to aerial attacks remain. Given the constant

unpredictability, future disruption should be expected.

Although diplomatic focus and efforts continue to explore any possible solutions to ending the Russian war in Ukraine, it remains that until any form of a ceasefire is agreed and enforced, Russia is likely to use any pretext for future attacks on Black Sea maritime operations, if deemed useful to achieve their military or political objectives.

Martial law remains in place with some local night-time curfews. All Ukrainian ports are operating at ISPS level 3 following the communication to the IMO by the Ukrainian authorities.

Russia:

Port information is located in the port table.

It is assessed that Ukraine has continued military activity in the Black Sea, with numerous Russian reports of engagements with unmanned naval drones in the Black Sea - with USVs reaching as far as Novorossiysk - as well as reports of attacks across Crimea.

Previous videos of naval and aerial drone attacks in Russian ports also highlights a general lack of advanced counter measures. Russian anti-air is often fired at near horizontal angles. This is likely to lead to damage to port facilities and vessels and may potentially also wound or kill sailors or port workers.

When using Russian ports other than those in the Black Sea, for example Arctic or Baltic Sea ports, it is possible that Russian authorities will try to recruit or coerce crews on visiting vessels with non-Russian flag or crew, to conduct sabotage of undersea cables by releasing the anchor and dragging it across cables or pipelines. Such cases of recruitment have not been confirmed, but it is possible given the ongoing Russian effort to conduct sabotage of undersea cables in the Baltic Sea, and the requirement for plausible deniability.

There have been a number of incidents of vessels being hit by explosions, likely due to limpet mines, after these vessels have called Russian ports, or during Russian port calls. While the circumstances are unclear, it is a possibility that Ukrainian special forces and

intelligence units are part of a wider campaign of mining vessels calling Russian ports.

Conflict outlook:

Recent developments along the frontline do not change the threat assessment in the northwestern Black Sea.

The deadline set by US president Trump for a ceasefire or peace-agreement to be reached, between Russia and Ukraine, will expire on 08 August (Friday). While Trump has threatened extensive sanctions and economic pressure, it remains uncertain what will actually happen if Russia does not comply. Given that Russia is reportedly the most sanctioned country in the world, further sanctions seem unlikely to have major immediate impact.

It is more interesting to note, that Trump and the US administration may be planning secondary sanctions on countries conducting business with Russia. An example of this is the announced additional 25% tariffs on India due to the country's import of Russian oil. Coercing countries into not importing Russian oil will be a major issue for the Russian energy exports, and will be a strong signal against trading with Russia. It is unlikely that Trump will distinguish between countries buying oil legally under the set price-cap, and the ones in breach of sanctions.

Meetings between US representatives and President Putin during the week did not immediately result in any major breakthroughs, and details of the meetings have not been disclosed as of the time of latest intelligence of this report. The levy of +25% tariffs on India on the same day indicate that no real progress was made. Still, it is rumoured that President Trump and Putin will meet at some point next week, although this has not been confirmed.

As noted in previous reports, the most likely type of negotiated solution is currently a highly limited ceasefire in a specific area or a hold on a specific type of weaponry.

It has been rumoured that Russia will suggest a ceasefire in the air, likely meaning that all use of airborne weapons (long range drones, missiles, and gravity bombs) will be prohibited. Such a ceasefire will greatly reduce the threat of direct strikes against ports and collateral

damage against vessels calling Ukrainian ports. Similarly, it will limit the threat against Russian ports, although Ukraine have demonstrated greater capabilities in surface weapons in the past, and strikes against maritime targets may continue by using those capabilities.

It is possible that Ukraine will be willing to accept such a ceasefire, considering the extreme pressure of indiscriminate Russian attacks on large cities over the Summer. Still, a ceasefire will also limit Ukraine's own successful attacks against the Russian rear and Russian energy infrastructure. Both parties will also be very aware of how their actions are perceived by the US – where Trump is under pressure to show some progress on the conflict - and this is also likely to influence the Ukrainian response.

If accepted, it is uncertain as to how such a ceasefire would be monitored and implemented. Large and high-intensity strikes may occur before a ceasefire takes effect, including against ports.

It remains the assessment that as long as Russia sees it is making progress along the contact-line, regardless of the cost, it is unlikely to engage earnestly in any negotiations toward a sustainable peace.

Instead, they may continue to make minor goodwill gestures to appease the US administration. This strategy will enable President Putin to include maximalist war objectives in ceasefire demands, thereby hindering substantial negotiations.

New sanctions on Russia could alter Black Sea security dynamics, with potential restrictions on EU, NATO, or Western-affiliated vessels accessing Russian ports. Detention and harassment of such vessels by Russian authorities are possible. The war has shown potential for broader hybrid warfare, with Western intelligence warning of increased Russian activities in Europe. Ukraine is also likely to continue to target Russian infrastructure beyond the Black Sea. Examples include "parcel bombs" at DHL sites and incidents involving Nord Stream pipelines.

Annex 1 – Illustration of reported mined areas

Annex 2 – Announced temporary corridor from UKR Black Sea ports

Annex 3 – Reported Kerch Strait inspection area

Annex 4 – List of commercial vessel incidents

Annex 5 – Incidents

Ukraine and northern Black Sea ports

Refer to the following page for definitions and information on sanctions/commercial restrictions

Port	Current port situation	Current local situation	Operations	Security
Odessa	The port is understood operational in accordance with the IMO Circular Letter 4748, and local guidance.	Russian strikes do occur against critical infrastructure in the Odesa Oblast, including some direct targeting of Odesa city and port. Future attacks targeting Odesa port cannot be ruled out. The overall security situation remains highly unpredictable and local operational differences and issues should be expected. Disruptions to operations may occur due to power outages or air raid alarms.		
Pivdenny	The port is understood operational in accordance with the IMO Circular Letter 4748, and local guidance.	Russian strikes have occurred against targets in and near Pivdenny in the past, including targeting of the port. Future targeting in the area as part of military operations cannot be ruled out. The overall security situation remains highly unpredictable and local operational differences and issues should be expected. Disruptions to operations may occur due to power outages or air raid alarms.		
Mykolaiv	Closed. Cargo operations suspended for commercial operations.	In control of Ukrainian forces. Russian strikes against military targets and critical-infrastructure targets in or near the city do occur.		
Mariupol	Disputed operational status.	Controlled by Russian forces and part of annexed territory. Actual operational status is disputed with Russian authorities reporting the port to be open, although this is with very limited traffic prioritized by the Russian state. Reports indicate the rebuilding of the port facilities by Russian military and contractors.		
Chornomorsk	The port is understood operational in accordance with the IMO Circular Letter 4748, and local guidance.	Russian strikes have occurred against critical infrastructure in the Odessa Oblast. Future attacks targeting Chornomorsk port cannot be ruled out. The overall security situation remains highly unpredictable and local operational differences and issues should be expected. Disruptions to operations may occur due to power outages or air raid alarms.		
Ukraine Danube ports	Ukraine Danube ports are operating and handling ship calls via the Danube, and the Sulina and Bystre Canals.	Incidents involving mines have previously occurred in the Black Sea near the canals. Russian strikes against the ports in the Izmail region, do occur. Local weather conditions, water levels, and pilot shortages also impact maritime operations. ISPS Level 3 is in place, as communicated by the Ukrainian authorities. Delays and congestion have been reported in relation to port and canal operations.		

Port	Current port situation	Current local situation	Operations	Security
Kerch Strait	Open for navigation but only for authorized transit. Ports located within the Strait are reported to be operating. Inspection regime and additional security measures are in place.	UKR naval drone or missile strikes against the Kerch Strait Bridge and nearby naval stations and critical infrastructure remain possible. Attacks are not expected to directly target commercial maritime traffic, but collateral damage cannot be ruled out. Russian defensive fire against drones may hit commercial traffic. Russia has announced transit restriction of vessels which are not loaded in Russian ports. Scrutiny against crew is possible *. See Annex 3 for reported Kerch Strait inspection area.		
Russian Black Sea ports	Open with restrictions. Additional security measures are in place.	Ports operating at ISPS level 2, some operational delays possible. Ukrainian attacks against naval or state-affiliated vessels, and port infrastructure, using naval drones, aerial drones, or cruise missiles, is possible. Collateral damage from drones may occur in case of incidents, and Russian defensive fire against drones may hit commercial traffic. Scrutiny against crew is possible *.		
Russian Sea of Azov ports	Open with restrictions. Sea of Azov is currently closed to unauthorized navigation by the Russian authorities. Additional security measures are in place.	Ports operating at ISPS level 2, some operational delays possible. Ukrainian attacks against naval or state-affiliated vessels, and port infrastructure, using naval drones, aerial drones or cruise missiles, is possible. Collateral damage from drones may occur in case of incidents, and Russian defensive fire against drones may hit commercial traffic. Scrutiny against crew is possible *.		
Temporary corridor from UKR Black Sea ports	Operational status is reported to be open, in accordance with IMO Circular Letter 4748 – though likely influenced by local operational circumstances in the NW Black Sea.	The corridor is reported to be running without considerable issues, although disruption following attacks are to be expected. Any tacit agreement from Russia on current transits are unknown, and further Russian acceptance is unclear if the increased tempo of Ukrainian strikes on Russian assets in the Black Sea continues. Military activity in and near the corridor is possible, collateral damage to vessels is possible.		
Constanta	Open.	Operating, with additional cargo diverted to Constanta due to closed Ukrainian ports. Congestion should be expected, and although this is being managed, it could lead to delays.		

* Constraints and demands related to vessels with Ukrainian crewmembers. Russian crew with previous military service may be questioned by authorities withheld as part of Russian mobilization efforts. ** Risk Intelligence is not responsible for third-party content.

Operations and Security definitions

Operations:

Green – Operations in the area are ongoing normally with no significant issues.

Yellow – Some delays or disruptions in the area may be expected, which could be due to limitations to, for example, port operations and/or congestion in the area, or other difficulties with access or operating at the required ISPS level or complying with other procedures either at port or offshore.

Red – Operations have been significantly disrupted and ports or areas might be closed or only partially operating due to restrictions, blockades, lack of functioning infrastructure, personnel disruptions, and access concerns, or other issues preventing all or most operations.

Security:

Green – The area is secure and there are no direct or indirect security threats in the port vicinity or offshore area. Low threat to vessels/personnel.

Yellow – There are no direct security threats but there are possible indirect threats in the vicinity, particularly but not limited to conflict taking place in proximity either on land or offshore. Moderate threat to vessels/personnel.

Red – Direct threats are possible to the port or area and/or its immediate approaches, including collateral damage in the immediate area or direct attacks that could target infrastructure and vessels at berth/anchorages/underway. High threat to vessels/personnel.

Note on sanctions and commercial restrictions

Sanctions and commercial restrictions are being imposed on Russia in response to its invasion. These sanctions are evolving and will affect ongoing business operations in many complex legal ways. Sanctions are being applied to individual Russians, business entities, and to certain Russian export products (such as oil products). There are also restrictions on specific nationalities (such as US citizens) engaging in certain activities, restrictions on payments (in certain currencies and through certain institutions), and restrictions on Russia's import of particular dual-use items and technologies. Port entry bans for Russian vessels are being implemented (in the UK, for example).

The fine print of sanctions and restrictions might affect chartering arrangements in unexpected ways, depending on the connection to Russia. These issues, as well as insurance issues for operating in war risk areas, are not covered in this report and might need to be assessed separately to reduce the risk of exposure.

Advice given and recommendations made do not constitute a warranty of future results by Risk Intelligence or an assurance against risk. Recommendations made are based on information available at the time of writing. No express or implied warranty is given in respect of any judgment made or to changes or any unforeseen escalation of any factors affecting any such judgement.

Documents are for the benefit of the recipient only and may not be disclosed to any third parties without the prior written consent of Risk Intelligence; such consent not to be withheld unreasonably. The recipient agrees to indemnify Risk Intelligence against any claims and any resulting damages that may be caused by any unauthorised disclosure of such documents.

Annex 1:

Reported mined areas

Risk Intelligence (Illustration for visual guidance only)

NAVAREA III: See above for visual guidance on mined areas according to the Spanish flag administration (NAVAREA III 0092).

Mined areas are most likely a combination of deeper sea mines and shallow water mines for anti-amphibious operations as well as on beaches. Mines in the sea are most likely cabled or anchored and under control.

Please also note that active NAVAREA III warnings include a warning of possible drifting mines (NAVAREA III 0122) for Northwest, West, and Southwest areas of the Black Sea.

The above chart shows the announced temporary routes for civilian vessels to and from Ukrainian Black Sea ports. The Ukrainian Navy emphasizes that war risks, including mines, remain. Further details can be found in the IMO Circular Letter No.4748 *(Source: IMO Illustration for visual guidance only)*

Annex 3:

Reported Kerch Strait inspection area, as announced by the Russian authorities 02 August 2023.

Annex 4:

Black Sea commercial vessel incidents: Latest 10

Date	Name of ship	Type	Flag
03 JUL 2025	AJ ROSE	Bulk carrier	Sao Tome and Principe
11 MAR 2025	MJ PINAR	Bulk carrier	Barbados
01 MAR 2025	SUPER SARKAS	Bulk carrier	Siera Leone
01 MAR 2025	MSC LEVANTE F	Container ship	Panama
14 OCT 2024	NS MOON	Civilian vessel	Belize
14 OCT 2024	OPTIMA	General cargo vessel	Palau
09 OCT 2024	SHUI SPIRIT	Container ship	Panama
07 OCT 2024	OPTIMA	General cargo vessel	Palau
05 OCT 2024	PARESA	General cargo vessel	St. Kitts and Nevis
20 SEP 2024	GOLDEN LION	General cargo vessel	Antigua and Barbuda

Ukrainian forces destroy Russian radar station

august 5 2025

Region: Europe

Ukrainian special forces reportedly destroyed a Russian radar hub for the Black Sea on the Tendrivska spit in eastern Kherson at an unknown time on 05 August 2025.

The special operations team reportedly conducted an amphibious assault and used hand charges to destroy the critical infrastructure. A Bayraktar drone was used to destroy supply vessels in the area as well. Russia has yet to confirm this attack and any losses.

Port of Odesa reportedly hit by Russian strike

august 4 2025

Region: Europe

The Port of Odesa, Ukraine, was reportedly hit in a Russian missile strike at an unknown time on 04 August 2025.

According to reports on social and local media, the strike may have hit facilities related to the Port of Odesa. The extent of the damage and possible losses are unknown.

Oil depot targeted in drone attack

august 3 2025

Region: Europe

An oil depot in Sochi, Russia was reportedly targeted in a drone attack at 04:30 LT (01:30 UTC) on 03 August 2025.

The incident took place near: 43:26.06N 039:56.13E.

Multiple reports indicate that the drone attack triggered a massive fire at an oil depot near Sochi International Airport. More than 120 firefighters were reportedly deployed to fight the blaze. At least one fuel tank with a capacity of 2,000 cubic metres was reportedly on fire. Reports indicate that the attack disrupted flights at the airport.
