

MC(26)51 -Annex A - publication of new UN LOCODES

Summary: The most recent UN/LOCODE update has been finalised and published on UNECE's website. Member State authorities and stakeholders can actively contribute to the UN/LOCODE update process through submissions to the platform.

Dear members,

To complement C-14645, I would like to inform you that the most recent UN/LOCODE update (2025-1) has been finalised and [published](#) on UNECE's website. It is accompanied by a release note dated 15 February 2026. **Please note that the newly approved UN/LOCODEs cannot be used retroactively to declare stops at these facilities.**

The UN/LOCODE updates are scheduled twice per year.

The UN/LOCODE update process is conducted through the Data Maintenance Request (DMR) system, which involves frequent consultation with a broad range of stakeholders, including national authorities, international organisations, and the private sector. Requests for new or updated UN/LOCODE entries can be submitted via the dedicated online portal: [UN/LOCODE Entry System - welcome page](#).

Submissions are acknowledged upon receipt, reviewed within the DMR framework, and validated, where necessary in consultation with national

authorities, before publication.

Member State authorities and stakeholders can actively contribute to the process through submissions to the DMR platform.

The Secretariat will keep the members informed on the latest developments on this topic.

I remain at your disposal if you have any questions.

Best regards,

Fanny
